

Pre-surgery COVID-19 testing

All patients undergoing elective surgery or a procedure at Cabrini will continue to be required to test for COVID-19 prior to their admission.

This process also applies to parents/guardians accompanying paediatric patients and partners or a designated support person attending a caesarean section.

This is an important precaution to ensure your safety - and the safety of other vulnerable people in our care - during your admission, and your Cabrini care team is here to support you during this process.

Further information about this process is outlined below, and impacted patients will also have a call with the pre-admission team from Cabrini 1-2 days prior to their surgery, outlining the steps to be taken in more detail (if you do not have a mobile, we will contact you via your home phone).

Why do I need to be tested?

Studies show that the mortality and morbidity rates for coronavirus (COVID-19) positive patients undergoing both elective and emergency surgery are higher than otherwise expected, even when such surgery is relatively minor.

By undertaking a test prior to your surgery, our care team can better understand your current health condition. They will use this information to take the best precautions to ensure your safety before, during and after surgery and provide care appropriate to your condition.

What type of test do I need?

Patients (and where applicable, carers/partners) must have either a Rapid Antigen Test (RAT) or PCR test prior to their surgery.

It is the patient's responsibility to source a RAT from a local provider, such as a pharmacy. Patients undertaking a RAT should do so one day before surgery and minimise potential exposures until admission. Patients can contact Cabrini on 9508 1466 for further support.

How do I provide my results to Cabrini?

On admission, patients will need to show admission staff a photo of their negative RAT, along with their Medicare card and the date RAT was completed or show an SMS with their PCR test result.

Patients who present for surgery without a negative test result will be managed on a case-by-case basis. This may include postponing non-urgent surgery.

What do I do if I have recently tested positive for COVID-19 or if I receive a positive result?

Patients who have tested positive for COVID-19 within the last 30 days will not need to undergo pre-operative testing. In this situation, patients will need to contact their doctors' rooms to notify them. If urgent and outside of business hours, they will need to call Cabrini on 9508 1466 to discuss their surgery.

If a patient, or their carer/partner, tests positive on a RAT or PCR, they will need to contact their doctors' rooms to notify them. If a patient has had COVID-19 within 7 days of their surgery, and are still displaying symptoms, surgery will be post-poned and the patient advised to call their doctors' rooms to reschedule. If urgent and outside of business hours, they will need to call Cabrini on 9508 1466 to discuss their surgery. We will coordinate the appropriate response, in line with the patient's clinical urgency, and escalate accordingly.
